

Pharaoh's Hidden Chamber - Simple Walkthrough

The Goal

Exploit an Insecure Direct Object Reference (IDOR) to access the hidden chamber and retrieve the flag: NOD{pharaohs_8472_hidden_9381_truth}.

Solution Steps

1. **Visit the Login Page:** Go to /login. You will be authenticated as "Explorer" and redirected to /temple?glyph=MTAx.
2. **Decode the Glyph:** The glyph value MTAx is Base64 encoding. Decoding it (echo "MTAx" | base64 -d) reveals the value 101, which is your User ID.
3. **Forge the Admin Glyph:** To become the admin (Pharaoh), we need User ID 1. Convert 1 to Base64 (echo -n "1" | base64), which results in MQ==.
4. **Bypass Access Control (IDOR):** Change the URL to use your forged glyph: GET /temple?glyph=MQ== You will see a welcome message for the Pharaoh.
5. **Capture the Flag:** Access the hidden chamber with your admin glyph: GET /chamber?glyph=MQ== The page will display the flag: NOD{pharaohs_8472_hidden_9381_truth}.
